Empowering visually impaired
enhancing mobility

- NAVINAUT is a torch like device for visually impaired for ease of their mobility without a stick
- It detects obstacles while walking and vibrates to alert them
- The torch type compact design makes it easy to carry
- The device is ergonomically designed for ease of use
- The compact design also helps in detecting smaller objects
- As it is a hand device it helps them detect obstacles in all directions
- This devices ensures peoples safety without the need of carrying a stick

 To turn on the device, press the button at the back side of the device

 Once the button is pressed the device starts detecting the obstacles

 To turn of the device press the same button
